Workshop Summary:
Antisemitism and social networks

The objective of the workshop is to understand the evolution of anti-Semitic imagery, from Middle Ages to the 21st century, the role played by Internet and the mechanisms of its diffusion on social networks. By comparing historical documents with documents from social networks on the Internet, the aim will be to understand how current antisemitic prejudices are constructed and disseminated and where they come from in order to develop pedagogical tools and practices capable of deconstructing the mechanisms currently in force.
